

Renewable for Business

Renewable for Business from EDF Energy via the CCS Framework

The low cost way to reduce the carbon emissions associated with your organisations electricity supply.

Report zero emissions from your purchased electricity

Modern carbon reporting standards like the GHG Protocol require organisations to base their carbon emissions reporting on the choice they make for their electricity purchases (called market-based emissions), as well as their grid connection (called location-based emissions). The idea is that using both numbers gives a fairer, more complete picture of an organisation's efforts to reduce its carbon emissions by choosing to purchase low-carbon electricity and being more energy efficient.

With Renewable for Business, your organisation's electricity supply is backed by certified renewable technologies (like wind, solar and biomass) which all have a zero emissions rating. That takes your market-based emissions to zero.

For a small extra cost

Renewable for Business costs a little more than our other supply options. The difference pays for REGOs (Renewable Energy Guarantees of Origin) – tradeable renewable energy certificates that prove we have sourced renewable electricity for your supply contract – as well as the assured processes we apply to the product.

Independently verified for extra confidence

To give you added confidence, the Carbon Trust has assured that the electricity supplied for the year ended in 31st March 2023 under the following products – Renewable for Business, Select Renewable, Clean Renewable and UK Renewable – all of which are under the umbrella of the “Renewable tariffs” is 100% covered by Renewable Certificates that have been obtained and retired by EDF, in line with the WRI GHG Protocol Scope 2 Guidance (2015).

You can download our report and the findings of the Carbon Trust's assurance at edfenergy.com/CarbonTrust

All from one of Europe's largest renewable energy generators and purchasers

With 28GW of installed renewable generating capacity, EDF Group is one of the largest renewable generators in Europe. We operate 36 wind farms in the UK with more on the way. We are also a major purchaser of renewable electricity from many independent renewable generators in the UK.
